

Saad Sherif

iOS Developer

✉ saadsherif02@gmail.com  [linkedin](#)  [Github](#)  [+201093771745](tel:+201093771745)  Egypt

PROFILE

iOS Developer with +5 years building production apps in Swift and SwiftUI. Specializes in Clean Architecture (MVVM + Coordinators), modular codebases, and real-time features like live chat and payments. Contributed to iOS development for Gulf-market clients, including a Kuwaiti-backed livestock platform. Actively integrates AI-assisted workflows into a quality-first engineering practice.

WORK EXPERIENCE

InnovaDigits , iOS Developer

Feb 2026 – Jul 2026 | Remote, Egypt

Zaya – event-planning marketplace app connecting users with vendors (venues, packages, services) for weddings and celebrations

- Built core app features using Clean Architecture (MVVM + Coordinators) with per-feature Dependency Injection containers – fully SwiftUI, no UIKit, using the @Observable macro and async/await
- Implemented a custom, type-safe Router/Coordinator navigation system supporting 10+ modular features across independent per-tab NavigationStacks (Event Board, Gifts, Vendor Catalog, Bookings, Loyalty, ChatBot Support)
- Built real-time features – Pusher-based WebSocket chat for event coordination and deep-link & push-notification routing – supporting real-time coordination across all active user events on the platform
- Developed vendor booking flows (halls, packages, services) with integrated payment summaries, guest invitation management with QR code scanning, and a loyalty/points system

AAIT , iOS Developer

Sep 2021 – May 2026

Mansoura, Egypt

- Developed and maintained iOS applications for **+10K users** using Swift and UIKit within a **10-person** development team, following SOLID principles
- Integrated apps with backend REST & WebSocket services, implementing local caching that **reduced load times by 20%**
- Collaborated with backend, product, and design teams to plan and deliver features, shipping **+50 releases** over 4+ years
- Managed app builds and releases via TestFlight and App Store Connect
- Transitioned to part-time remote in 2026 to continue ongoing collaboration on Mesllah (see Projects)

SELECTED PROJECTS

Mesllah

- iOS ERP system for managing farm animals: production, feed, medications, vaccinations, animal history, employee management, invoicing, and breeding requests. Clean Architecture (MVVM + Coordinator), modular UIKit, Core Data offline sync, Combine, deep linking, Dark/Light Mode.

Al-Kharashi

- Family App connecting family members via posts, magazines, events, and an interactive family tree. MVVM, Coordinator, Clean Architecture.

Yussr Education

Live-streaming education platform with interactive whiteboard (Agora) and real-time WebSocket chat, optimized for iPad. Dual roles (Student  / Teacher ).

Qetass

Legal consultation app with voice/video calls (OpenTok), CallKit, PushKit, and AVFoundation for secure, real-time communication. Dual roles (User  / Lawyer ).

Serva

Connects users with service providers via real-time Socket.IO  chat and Google Maps location tracking. Clean Architecture + MVVM, dual roles (Client  / Provider .

TECHNICAL SKILLS

- **Languages & Frameworks** (Swift 5.9 & Swift 6, SwiftUI, UIKit | Swift Concurrency: async/await, actors, structured concurrency, Sendable conformance | @Observable macro (iOS 17+) | Reactive programming (Combine) | Object-Oriented Programming)
- **Architecture & Design** (Clean Architecture, MVVM, MVC, MVP, VIPER | Coordinator pattern, custom Router/navigation systems, per-feature Dependency Injection | Concurrency-safe architecture: actor isolation, @MainActor boundaries, data-race safety under Swift 6's strict concurrency checking | Design Patterns & SOLID Principles)
- **AI & Agentic Coding** (Claude Code — CLI-based agentic development workflows across model tiers (Sonnet, Opus) | AI-assisted architecture design — authored [CLAUDE.md](#)  guideline files directing AI coding agents on Clean Architecture conventions and codebase structure (Zaya, Todeoy SwiftUI rewrite) | Prompt engineering for dev workflows — structured [PROMPTS.md](#)  playbooks for iterative, multi-step AI-assisted feature development | AI-assisted app builders (e.g., Replit) evaluated against native iOS tradeoffs)
- **API & Backend Integration** (RESTful & WebSocket API integration (URLSession, Alamofire) | Real-time communication APIs: Pusher, [Socket.IO](#)  | Payment Gateway Integration: HyperBay, Moyasr, PayTabs (production); evaluated Paymob, Kashier, Fawry, and Tap Payments for Egypt market expansion | Live Streaming & Communication APIs: Agora, OpenTok, CallKit, PushKit, AVFoundation | Apple App Site Association (AASA) / Universal Links configuration for deep linking)
- **Data & Storage** (Core Data, Realm | Offline support with backend sync)
- **Tooling & Delivery** (Git (GitHub, GitLab, Bitbucket) | CocoaPods, Swift Package Manager | TestFlight, App Store Connect, App Store Optimization | Localization)

EDUCATION

Mansoura University , Bachelor's Degree: Faculty of computers and informations 2016 – 2020 | Mansoura, Egypt

COURSES

- [Claude Code in Action](#) 
- [Swift 5 iOS Application Developer on \(Coursera\)](#) 
- iOS 13 & Swift 5 - The Complete iOS App Development on (Udemy)

SOFT SKILLS

- Time Management
- Collaboration with the work team
- Discussing and exchanging opinions

LANGUAGES

Arabic — Native/Bilingual

English — Conversational
