

Saad Sherif

iOS Developer

Cairo, Egypt | [+20 109 377 1745](tel:+201093771745) | saadsherif02@gmail.com | [linkedin/saad-sherif](https://www.linkedin.com/in/saad-sherif) | [github/Sa3doola](https://github.com/Sa3doola)

PROFILE

iOS Developer with 5+ years building and shipping production apps in Swift, SwiftUI, and UIKit. Specialized in Clean Architecture (MVVM + Coordinators) and Swift 6 concurrency, with hands-on experience in real-time chat, payment integrations, and offline-first apps. Most recently delivered Event-Box, an event-planning marketplace app, from development to App Store release, working closely with backend, Android, and QA teams.

WORK EXPERIENCE

InnovaDigits , iOS Developer (Contract)

Feb 2026 – Jul 2026 | Remote, Egypt

- Developed the iOS app for Event-Box, an event-planning marketplace, end to end, from initial setup to App Store release, using SwiftUI and Clean Architecture (MVVM + Coordinators).
- Worked within a cross-functional team of business analysts, QA, backend, and Android developers to plan, build, and test features.
- Acted as the communication link between the backend team and the Android developer, relaying new requirements and change requests to keep both platforms aligned.
- Delivered the project on completion of the contract; the app is published on the App Store.

AAIT , iOS Developer

Sep 2021 – May 2026 | Mansoura, Egypt

- Built and maintained 5+ client iOS apps serving 10K+ users, using Swift and UIKit, as part of a 10-person development team.
- Delivered apps across varied domains: legal consultation with voice/video calls (Qetass), live-streaming education (Yussr), real-time service marketplace (Serva), livestock ERP (Mesllah), and a family social app (Al-Kharashi).
- Integrated REST and WebSocket APIs, and implemented local caching that reduced load times by 20%.
- Worked with backend, product, and design teams to plan and deliver features, shipping 50+ releases over 4+ years.
- Managed app builds and releases through TestFlight and App Store Connect.
- Moved to part-time remote in early 2026 to keep supporting Mesllah alongside the InnovaDigits contract.

SELECTED PROJECTS

Event-Box (InnovaDigits)

Event-planning app for weddings, birthdays, and corporate events: vendor discovery and booking, guest management, gift registries, and team collaboration. Bilingual (Arabic/English), iOS 17+.

- Built the app in SwiftUI with Clean Architecture (MVVM + Coordinators), per-feature dependency injection, the @Observable macro, and async/await.
- Designed a type-safe Router/Coordinator navigation system with independent per-tab NavigationStacks across 10+ feature modules.
- Implemented real-time chat over WebSockets (Pusher), plus deep-link and push-notification routing.
- Built vendor booking flows (halls, packages, services) with payment summaries, guest invitations with QR code scanning, a gift registry, and a loyalty points system.

Mesllah (AAIT) , Livestock management ERP for a Kuwaiti client, covering production, feed, medications, vaccinations, animal history, employees, invoicing, and breeding requests.

- Built the iOS app in UIKit with Clean Architecture (MVVM + Coordinators) and a modular codebase.
- Implemented offline-first data with Core Data and background sync to the backend, so farm staff can keep working without a connection.
- Used Combine for reactive data flow, plus deep linking and Dark/Light Mode support.

Qetass (AAIT) , Legal consultation platform connecting clients with lawyers through in-app voice and video calls, delivered as two separate apps for each role.

(User  **/Lawyer**  **)**

- Integrated voice and video calling with OpenTok (Vonage Video API).
- Implemented native incoming-call handling with CallKit and VoIP push notifications via PushKit, so calls ring like regular phone calls even when the app is closed.
- Managed audio sessions and media capture with AVFoundation.

Yussr Education (AAIT) ,

Live-streaming education platform optimized for iPad, delivered as two separate apps for students and teachers.

(**Student**  / **Teacher** )

- Integrated live video classes with Agora, including an interactive whiteboard shared between teacher and students in real time.
- Built real-time in-class chat over WebSockets.
- Optimized layouts and interactions for iPad as the primary device.

Al-Kharashi (AAIT) ,

Private family social app connecting members through posts, magazines, events, and an interactive family tree.

- Built the interactive family tree view and the posts, magazines, and events feeds.
- Structured the app with Clean Architecture (MVVM + Coordinators).

Serva (AAIT) ,

Service marketplace connecting clients with service providers, delivered as two separate apps for each role.

(**Client**  / **Provider** )

- Built real-time chat between clients and providers with Socket.IO.
- Integrated Google Maps for live provider location tracking.
- Structured the codebase with Clean Architecture and MVVM.

TECHNICAL SKILLS

Languages & Frameworks

- Swift 6, SwiftUI, UIKit, Combine, Observation

Architecture

- Clean Architecture, MVVM + Coordinators
- Custom Router navigation, per-feature dependency injection
- Modular codebases, SOLID

Real-time & Media

- Agora, OpenTok (Vonage)
- CallKit, PushKit, AVFoundation

Tooling & Delivery

- Git (GitHub, GitLab, Bitbucket)
- CocoaPods, Swift Package Manager
- TestFlight, App Store Connect, App Store Optimization
- Localization (Arabic/English, RTL)

Payments

- HyperPay, Moyasr, PayTabs

Concurrency

- async/await, actors, structured concurrency
- Sendable, @MainActor isolation, Swift 6 strict concurrency checking

Networking

- REST APIs (URLSession, Alamofire)
- WebSockets (Pusher, Socket.IO)

Data & Storage

- Core Data, Realm
- Offline support with backend sync

AI-Assisted Development

- Claude Code and Codex agentic workflows
- CLAUDE.md project guidelines
- Structured prompt playbooks for multi-step feature work

App Services

- Push notifications, deep linking, Universal Links (AASA)
- Google Maps

EDUCATION

Mansoura University  , Bachelor of Computers and Information

2016 – 2020 | Mansoura, Egypt

COURSES

- [Claude Code in Action \(Anthropic\)](#) 
- [Swift 5 iOS Application Developer \(Coursera\)](#) 

LANGUAGES

Arabic — Native

English — Professional working proficiency
